Supplementary Figure 2. Proportions of tumor-infiltrating immune cells between two groups based on high and low expression of the 16 genes and 8 immune checkpoint molecules in the GSE dataset. Statistical significance was evaluated using the Mann-Whitney U test (ns, not significant; * $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$; **** $p < 0.0001$).
